Abstract

Table 1 lists a number of putative GPCRs identified by NC-IUPHAR [161], for which preliminary evidence for an endogenous ligand has been published, or for which there exists a potential link to a disease, or disorder. These GPCRs have recently been reviewed in detail [121]. The GPCRs in Table 1 are all Class A, rhodopsin-like GPCRs. Class A orphan GPCRs not listed in Table 1 are putative GPCRs with as-yet unidentified endogenous ligands.

Table 1: Class A orphan GPCRs with putative endogenous ligands

</table>
In addition the orphan receptors \textit{GPR18}, \textit{GPR55} and \textit{GPR119} which are reported to respond to endogenous agents analogous to the endogenous cannabinoid ligands have been grouped together (\textit{GPR18}, \textit{GPR55} and \textit{GPR119}).

\textbf{Contents}

This is a citation summary for Class A Orphans in the \textit{Guide to Pharmacology} database (GtoPdb). It exists purely as an adjunct to the database to facilitate the recognition of citations to and from the database by citation analyzers. Readers will almost certainly want to visit the relevant sections of the database which are given here under database links.

\textit{GtoPdb} is an expert-driven guide to pharmacological targets and the substances that act on them. \textit{GtoPdb} is a reference work which is most usefully represented as an on-line database. As in any publication this work should be appropriately cited, and the papers it cites should also be recognized. This document provides a citation for the relevant parts of the database, and also provides a reference list for the research cited by those parts. For further details see [68].

Please note that the database version for the citations given in \textit{GtoPdb} are to the most recent preceding version in which the family or its subfamilies and targets were substantially changed. The links below are to the current version. If you need to consult the cited version, rather than the most recent version, please contact the \textit{GtoPdb} curators.
